1. The Perfect Public Transport System

Imagine you are designing the transport system for a new city.

Decide:

- How many buses?
- How many train lines?
- Where should stations be?
- Should people pay for buses?
- Should bicycles be free on trains?
- Should cars be restricted?

Prepare your plan and present it to another group.

Mini Debate

Choose one side:

**PUBLIC TRANSPORT SHOULD
BE CHEAPER THAN CARS.**

FOR
or
AGAINST

Prepare three arguments.
Then debate another student.

2. What Would You Do?

Discuss these situations.

1. You are late for an important meeting and your bus is 20 minutes late.
2. Your train is completely full and an elderly passenger gets on.
3. You discover that you have bought the wrong ticket.
4. You are visiting a city and cannot find the correct bus stop.
5. Your usual bus route has suddenly changed.

What would you do?

4. Final Challenge – Describe Without Naming

Choose something from the picture.

You have **30 seconds** to describe it without saying its name.

Your partner must guess it.

Make it difficult!

Where is it? What does it look like? What is it used for? Who uses it? How is it different from another vehicle?

5. One Last Question

If you could completely change one thing about public transport in your city, what would you change — and why?
