Vocabulary Explained

Bee dance: a series of movements made by bees to let other bees know the direction and distance of food or a new home.

Beeswax: a thick substance produced by bees to make their comb cells.

Colony: a group of many bees who live and work together in a hive.

Comb: a grouping of 6-sided cells built from beeswax used to store food and baby bees.

Drone: a male bee. His only job is to mate with the queen.

Nectar is a liquid found in flowers collected by bees and made into honey.

Pollen: a powder found on flowers and used in plant reproduction. Bees use pollen as a food source.

Stinger: a part of the bee that is used to inject venom (poison) into its enemy. A worker bee can only sting once and then she dies.

Venom: a poisonous liquid secreted by bees defending their colony.
