What advice would you give someone who always forgets their password? 4. Do you think fingerprint or face login is better than passwords? Why?

Reading Passage: I Forgot My Password Again

Mei sat at her desk, staring at her laptop. She needed to log into her school account to download a file, but the login screen asked for her password. Mei typed it in quickly.

"Incorrect password," the screen said.

She frowned. "Wait... is it 'Mei2024!' or 'MeiSchool#88'?"

She tried both. Still wrong.

Mei sighed and clicked "Forgot Password." A message popped up: "We sent a code to your email." She opened her phone, checked her inbox, and copied the code. Then she created a new password.

"I'll remember this one," she said. But she wasn't sure.

Mei has many passwords—for school, email, shopping, and social media. She tries to make strong passwords, but she often forgets them. She doesn't write them down because her teacher said that's not safe.

Her friend Jun uses a password manager. "It saves all your passwords," he explained. "You only need to remember one."

"That sounds useful," Mei said. "But what if I forget that one?"

Jun laughed. "Then you're in trouble!"

Later that day, Mei downloaded a password manager app. She saved all her passwords and created one strong master password: "MeiSmartDragon2025!"

Now she only needs to remember one. She feels more organized and less stressed.

The next morning, her teacher asked everyone to log into the school website. Mei smiled and typed her password.

Success.

"I forgot my password again" is a sentence Mei hopes she'll never say again.

Comprehension Questions

(Write short answers. Use complete sentences if possible.)

1. Why couldn't Mei log into her school account?

2. What did Mei do after she saw "Incorrect password"?

3. How does Mei feel about remembering passwords?
